

Ibrahima THIOUNE

ENGINEERING STUDENT IN ELECTRONICS, ELECTRICAL ENERGY AND AUTOMATIC CONTROL – ENSEEIHT

06 05 71 52 46

thiouneibrahima32@gmail.com

PROFILE

First-year engineering student at N7, specialising in Electronics, Electrical Energy and Automatic Control (EEA), I am seeking a two-year work-study placement from September 2027 or an internship from June 2027 to apply and develop my technical skills. I am particularly interested in electrical energy, electrical engineering, system modelling and simulation, as well as automatic control.

EDUCATION

First Year of Engineering Programme – Electronics, Electrical Energy and Automatic Control (EEA) 2026 – 2027
ENSEEIHT – Toulouse, France

Third-Year Bachelor's Degree (L3) – Electronics, Electrical Energy and Automatic Control 2025 – 2026
University of Toulouse – Paul Sabatier, France

Higher Technician Certificate (BTS) – Electrical Engineering 2023 – 2025
CEDT Le G15

Scientific Baccalaureate 2020 – 2021
Lycée de Mboro

PROFESSIONAL EXPERIENCE

Electrical Maintenance Intern
METAL AFRIQUE | September 2024 – October 2024

- Worked on electrical installations.
- Wired electrical panels and assisted with equipment troubleshooting.
- Diagnosed faults and carried out preventive and corrective maintenance.
- Read electrical diagrams, performed tests and assisted with commissioning.

Store Assistant – ALDI
Toulouse | February 2026 – Present

- Processed customer purchases and handled checkout payments.
- Replenished shelves and organised products.
- Cleaned and maintained the store.
- Followed hygiene and safety procedures.

PROJECTS

Connected Beehive – IoT / LoRaWAN (L3 EEA Project)
University of Toulouse | January 2026 – June 2026
Remote monitoring of a connected beehive: sensor data transmission via LoRaWAN and TTN, processing with Node-RED, web visualisation (Ngrok), and autonomous solar power supply.

Off-Grid Photovoltaic System for a Medical Refrigerator
CEDT Le G15 | August 2025
Designed and built a photovoltaic system to power a medical storage refrigerator off-grid.

Snake Game in C
CEDT Le G15 | August 2025
Designed and developed a Snake game in the C programming language.

SKILLS

- Industrial automation: Ladder (LD) and FBD programming, requirements analysis.
- Modelling and simulation: MATLAB / Simulink model development.
- Control systems: time- and frequency-domain analysis, transfer functions, Bode plots and stability.
- Electronics: circuit and embedded-system simulation using Proteus and LTspice.
- Microcontroller programming: PIC, MPLAB, C and Assembly.
- Electrical maintenance and troubleshooting.
- Use of measuring instruments (multimeter, clamp meter, ammeter).
